"DynaTemp"

Home and Building Automation

Communication-capable valves, actuators, sensors and controllers become more and more important, not only for new buildings but also for the renovation of existing buildings. Building automation systems with their monitoring, controlling and optimising devices are paramount for comfortable, energy-efficient and cost-saving building management.

The effectiveness of such systems is, however, only guaranteed if the above products are coordinated to the optimum and if they adapt to the different demands during heat transport and transmission.

Oventrop offers systems consisting of actuators, controllers and valves which can be combined for different tasks of building automation. The Oventrop products may also be integrated into the systems of other manufacturers.

The Oventrop systems cover the following areas:

- Individual room temperature control
- Potable water circulation
- Heat generation, storage, distribution and transmission

"DynaTemp HA" Home Automation

Components communicating with communication centres (gateways) are used in the area of Home Automation (for individual dwellings and detached houses). The gateways communicate with smartphones, tablets and personal computers using the "TCP/IP" protocol. Easy remote access is possible by connecting the gateways to common routers.

With their system "DynaTemp HA", Oventrop offers gateways and components for room temperature control. Components, such as the wireless actuator "Aktor MH B" (ENOCEAN) or the wireless thermostat "R-Tronic RTB" (ENOCEAN) can communicate with gateways of other manufacturers.

Summary Automation and System components

"DynaTemp HA" is a house information system for room temperature control, switching (On/Off) of heat generators and monitoring and modification of the room climate values. The used bi-directional radio technology allows for the data exchange between the individual components.

The system "DynaTemp HA" consists of the following components:

- "Synet CR" Gateway for room temperature control and remote control of appliances via smartphone, tablet etc.
- "R-Tronic" Wireless thermostat (battery operated, optional supply via the network)
- "Aktor MH/MD CON B" Actuator (battery operated)
- "R-Con" Multichannel wireless receiver
- "R-Con 2P" Single-channel wireless receiver

"R-Con"

"R-Tronic RTFC K"

+

"R-Con 2P"

Option 1: "R-Tronic RT B"

Wireless thermostat for room temperature control with timer functions (battery operated, flush-mounted power pack or mains adaptor available as accessories)

Option 2: "R-Tronic RTF B"

As option 1, but with integrated humidity sensor and display of the relative humidity RH in % (battery operated, flush-mounted power pack or mains adaptor available as accessories)

Option 3: "R-Tronic RTFC K"

As option 2, but with additional sensor for measurement of the CO₂ content and display of the CO₂ concentration in ppm (no battery operation, power supply via external flush-mounted power pack or mains adaptor).

"R-Con"

Multichannel wireless receiver for surface heating and cooling systems. All three models of the wireless thermostat ("R-Tronic RT B", "R-Tronic RTF B" and "R-Tronic RTFC K") can be connected to the wireless receiver "R-Con". Combined surface heating ("R-Con") and radiator ("Aktor MH/MD CON B") control, for instance in bathrooms.

"R-Con 2P"

Single-channel wireless receiver for the transmission of a switching signal (On/Off) which is generated by the wireless thermostat "R-Tronic RTFC K" if a CO₂ threshold is exceeded or undercut.

Hydronic balancing with "Synet CR" and valves with "Q-Tech" in detached and semi-detached houses

Automatic presetting with "Synet CR":

Automatic presetting of thermostatic radiator valves, for instance in detached or semi-detached houses, can be carried out via a smartphone or tablet with the help of the gateway "Synet CR" and the actuators for wireless thermostats "Aktor MH CON B". Manual presetting at each radiator on the spot is thus not required.

Apart from room temperature control, the gateway "Synet CR" allows for the calculation of the maximum required volume flow for each radiator. The gateway "Synet CR" is preloaded with the calculation procedure (procedure according to "VdZ specialist rules for heating optimisation – procedure A").

The valve characteristic line of the thermostatic valves with "Q-Tech" which allows for the conversion of the detected volume flows for the stroke limitation of the actuators "Aktor MH CON B" is integrated in the gateway "Synet CR".

The user may carry out automatic presetting within a few steps via a smartphone or tablet with the help of the setup assistant of the OV app.

Automatic balancing with "Q-Tech":

Irrespective of differential pressure variations in the heating system, the radiator volume flow required for room temperature control is constantly maintained by the control and regulating valve with "Q-Tech". After having carried out the automatic presetting described above, the volume flow is limited to a maximum value by the gateway "Synet CR" and the actuator "Aktor MH CON B" mounted onto the thermostatic valve with "Q-Tech".

Sequence of automatic presetting and balancing with "Synet CR" and valves with "Q-Tech"

System illustration (example): Hydronic balancing with "Synet CR" and valves with "Q-Tech"

Advantages:

- Automatic calculation of the required volume flow for each radiator and automatic presetting of the thermostatic valves with "Q-Tech" via the actuator "Aktor MH CON B"
- Manual setting of the thermostatic valves at the radiator is not required
- Pipework calculation and regulation of the risers are not required
- Presetting of the valves in the riser is not required
- Hydronically balanced heating system during full and low demand periods
- Long battery life span as the "Aktor MH CON B" only carries out control commands for room temperature control

Power supply:
Mains adaptor (100-240 V ~/ 50-60 Hz) with table stand

1150684°
1150884#

Electronic wireless thermostat "R-Tronic RTFC K" for room temperature control according to adjustable timed programmes. The nominal and actual temperature of the room can be displayed. An integrated humidity sensor supplies information on the relative humidity RH in % and an integrated CO₂ sensor on the CO₂ content in ppm in the room air. Both values are displayed in the text line.

If preset limits are exceeded, a symbol asking for fresh air supply is displayed.

Up to 8 participants (such as actuators for wireless thermostats "Aktor MH/MD CON B", wireless receivers "R-Con" and wireless window contacts for room temperature setback) can be connected to the "R-Tronic RTFC K".

Power is supplied by a flush-mounted power pack or a mains adaptor with table stand.

Compatible with the gateway "Synet CR"

Article Article-No. Hint

"Aktor MH CON B" Wireless actuator (M 30 x 1.5)

Connection thread M 30 x 1.5
Electronic actuator for wireless thermostats with bi-directional wireless communication, battery operated

traffic white (RAL 9016)

Only functions in combination with the wireless thermostats "R-Tronic RT B/ RTF B/ RTFC K".

1150665

Electronic actuator for wireless thermostats for room temperature control according to adjustable timed programmes at the wireless thermostats "R-Tronic RT B/ RTF B/ RTFC K". Heating operation and the position of the valve (OPEN/CLOSED) of the "Aktor MH/MD CON B" are shown on the display of the wireless thermostat. Operation via the menu-driven wireless thermostat.

Awards:

"Aktor MD CON B" Wireless actuator (squeeze connection)

Squeeze connection
Electronic actuator for wireless thermostats with bi-directional radio communication, battery operated

traffic white (RAL 9016)

Only functions in combination with the wireless thermostats "R-Tronic RT B/ RTF B/ RTFC K".

1150675

These actuators for wireless thermostats can be fitted without adapter to the integrated distributors and thermostatic radiator valves with squeeze connection of the company Danfoss, series RA.

"R-Con" Wireless receiver

230 V, without plug, wiring on site

- 4 channels with logic module **1150770**
- 4 channels without logic module **1150771**
- 8 channels with logic module **1150772**
- 8 channels without logic module **1150773**

Electronic multichannel wireless receiver for room temperature control of up to 8 independent heating zones (surface heating) according to adjustable timed programmes at the wireless thermostats "R-Tronic RT B", "R-Tronic RTF B" and "R-Tronic RTFC K". Operation via the menu-driven wireless thermostat.

Additional functions (direct selection via the rotary switches at the wireless receiver):
- Pump logic with adjustable lead time and follow-up time (only item no. 1150770/ 72)
- Burner logic for heat demand (only item no. 1150770/ 72)
- Two point control
- PWM control for surface heating

Electrothermal actuators "Aktor T 2P" 24 V or 230 V can be connected to the 8 channels (closing contact with 4A/250 V AC each).

An external transformer is required for the power supply of 24 V actuators.

"R-Con HC"

Extension module heating/cooling for wireless receiver "R-Con"
In preparation.

1150774

The extension module is connected to the wireless receiver "R-Con" and is used for switching between heating and cooling operation via a C/O signal (change-over input). The C/O signal is provided by a reversible heat pump (volt free). Furthermore, the "R-Con HC" module features an input for dew point monitoring which interrupts cooling when the dew point is exceeded.

Article	Article-No.	Hint
---------	-------------	------

"Aktor T 2P" Electrothermal actuators (two point)
connection thread M 30 x 1.5

- "H NC", closed with current "off", 230 V **1012415**
- "L NC", closed with current "off", 24 V **1012416**

Oventrop electrothermal actuators are used for heating, ventilation and air conditioning. The actuators serve to control the room temperature and can be used e. g. with conventional radiators, radiators with integrated distributor, distributors/collectors for surface heating, radiant ceiling panels, chilled ceiling systems and induction air systems in combination with two point room thermostats. Further applications in bivalent heating installations.

For zone and room temperature control.
Connecting cable 1 m.

With "First-Open" function (except for actuators "open with current off") and stroke index.

Simple plug-in connection with valve adapter. Actuators can be installed in any position.

As for the model with auxiliary switch, a pump can for instance be switched via the integrated volt free contact. Due to their construction, the electrothermal actuators are secured against overvoltage which could occur when switching on neon tubes. A varistor is thus not necessary.

12.c "DynaTemp BA" Building Automation

Content

System summary	12.20
System types	12.21

"DynaTemp BA" Building Automation

The system "DynaTemp BA" allows for the automation of control processes for heat generation, distribution and transmission in larger residential and non-residential buildings.

integrated into the building automation systems of any manufacturer.

Compared with the system "DynaTemp HA" (for individual dwellings and detached houses), the "DynaTemp BA" components for control within the building automation system are determined by the type of use, degree of automation and the system technology.

Oventrop control units (DDC) and components, such as room thermostats, actuators and control valves can be

Summary Automation and System components

Models:**"CR-BS" Local individual room temperature control via bus technology****"CR-BX" Central individual room temperature control via bus technology**

The temperature control function of these two systems is different. As for the system "CR-BS", individual room temperature control without using auxiliary energy is carried out at the radiator with classic thermostat sensor technology (liquid sensor) and timed temperature setback is carried out by the control unit. With "CR-BX", temperature control, control of the setback periods and monitoring are carried out by the control unit. The sensor data is transmitted to the control unit by the field modules via a bus technology (C-bus). The control commands for the actuators, such as the thermostat "Uni LHZ" and the electronic actuators, are transmitted by the control unit to the field modules via the field bus. This way, an energy saving individual room temperature control for each application is guaranteed.

"CW-BS" Automatic thermal balancing and thermal disinfection in potable water circulation systems

The installation hydronics which is governed by the maintenance of an adequate potable water circulation temperature (according to DVGW 57 °C) is optimised by the control unit. Temperature detection is carried out by the Oventrop valve "Aquaström DT" for potable water circulation systems. The sensor temperatures are transmitted to the control units via the bus based field module and the control demands for the "Aquaström DT" are transmitted to the actuators by the "CW" via the field module.

Thermal disinfection is also controlled via the control unit. The latter transmits a starting signal to the boiler control; the potable water temperature is increased and thermal disinfection of the risers of the circulation installation is carried out.

The control unit can be connected to the centralised building control system for monitoring and visualization purposes. Warning messages can be transmitted via LAN or internet.

"CS-BS" Networking of stations for heat generation and distribution

This system allows the linkage of up to 6 bus application controllers of stations for solar heat generation, hot water preparation and different heating circuits via a bus technology. The data from the different controllers is fed into the data logger "CS-BS" in order to store and view the operating status, temperatures, flow rates and energy data over a longer period. New parameter settings for the controllers can be determined with the help of this data and the operation behaviour of the complete installation, including the storage cylinder and the boiler can be improved. Error diagnosis can also be carried out.

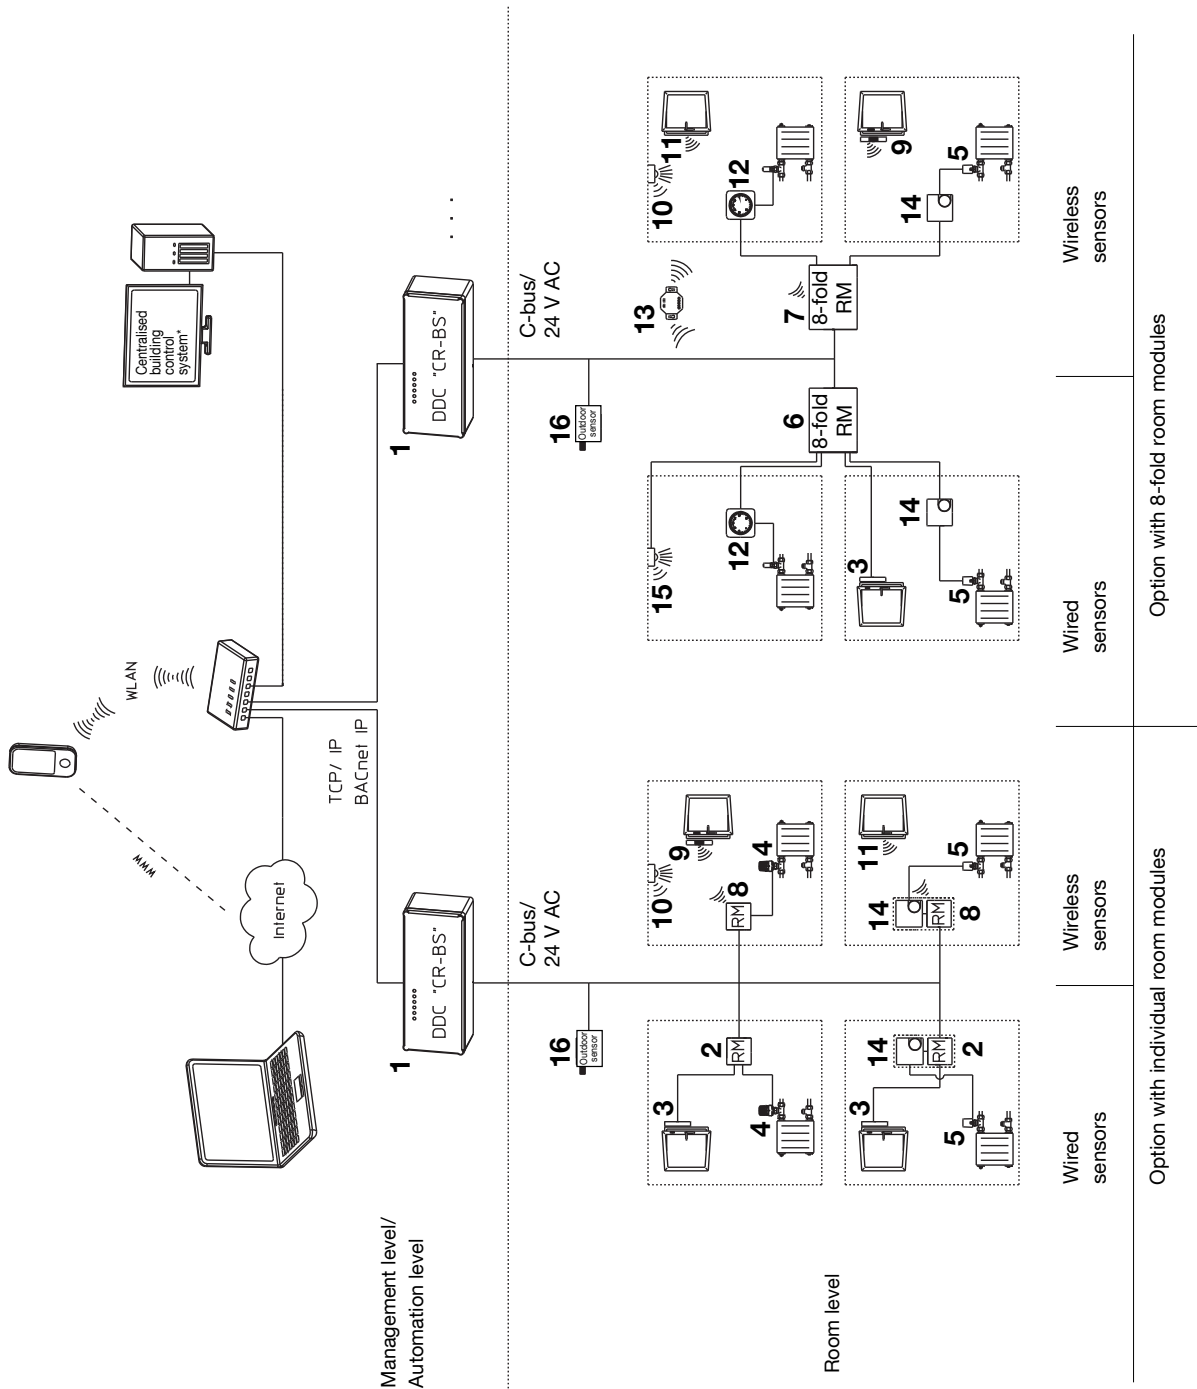

The installation data can be viewed via a PC or a standard smartphone. The integrated Web interface allows access to the system via a standard web browser. The connection to the network (LAN) and the internet can be carried out via a standard router. A flexible, even external, access to the installation is thus possible. It is, however, not necessary to integrate the data logger into a network, the direct connection of a PC is also possible.

---------	--------------	-------------	------

"Aktor T 2P" Electrothermal actuators (two point)
connection thread M 30 x 1.5

"L NC", closed with current "off", 24 V **1012416**

Oventrop electrothermal actuators are used for heating, ventilation and air conditioning. The actuators serve to control the room temperature and can be used e. g. with conventional radiators, radiators with integrated distributor, distributors/collectors for surface heating, radiant ceiling panels, chilled ceiling systems and induction air systems in combination with two point room thermostats. Further applications in bivalent heating installations.
For zone and room temperature control.
Connecting cable 1 m.
With "First-Open" function (except for actuators "open with current off") and stroke index.
Simple plug-in connection with valve adapter. Actuators can be installed in any position.
As for the model with auxiliary switch, a pump can for instance be switched via the integrated volt free contact. Due to their construction, the electrothermal actuators are secured against overvoltage which could occur when switching on neon tubes. A varistor is thus not necessary.

Room thermostat - surface mounting

24 V (25) **1152052**

The electric room thermostat is used for individual room temperature control in combination with the electrothermal actuators (two point) "Aktor T 2P".
Temperature range: 5 °C up to 30 °C
Heating: Use electrothermal actuators (two point) "closed with current off".
As for item no. 1152051/52/55/71/72, temperature may be set back by use of an external time switch (item no. 1152551/52 for 230 V, item no. 1152554 for 24 V).

Reinforcing cap

for electrothermal actuators (two point) and (0-10 V) **1012450**

To protect electrothermal actuators against vandalism.
The special valve adapter with connection thread M 30 x 1.5 for fixing of the reinforcing cap is included.

"Regtronic RH" Heating circuit controller

with 1 outdoor sensor and 3 additional sensors (PT 1000) **1152093**

with 1 outdoor sensor, 2 additional sensors (PT 1000) and remote control including room temperature sensor (PT 1000) **1152090**

Weather-guided control of the flow temperature of the heating system by activation of a heat generator and/or a mixing valve (e. g. "Regumat M3" or "Regufloor HW" with three-way mixing valve).
Controller for wall attachment with data bus (S-bus) for connection to the data logger "CS-BS".
Basic functions: 1 variable and 1 constant temperature heating circuit with heat demand. Extension via "Regtronic EM".

ErP classification heating circuit controllers "Regtronic RH" and "Regtronic EH"						
Item no.	Controller	Required accessories	Boiler control modulating (0-10 V)	On/Off	ErP %	Class
1152092	"Regtronic EH"	-		X	1.5	III
1152093	"Regtronic RH"	Adapter cable 1152086	X		2.0	II

1152090	"Regtronic RH" incl. remote control with room temperature sensor	2 x room temperature sensor 1152095 Adapter cable 1152086	X		5.0	VIII

Data can be viewed via a full graphics display. Interfaces: S-bus for connection to the data logger "CS-BS". SD-card slot for data recording.
Inputs: 8 inputs for sensors (PT1000, KTY, switch or remote control), 2 inputs for electronic flow sensor VFD (volume flow / temperature) and irradiation sensor.
Outputs: 4 solid-state relays (speed controlled), 1 standard relay (volt free), 2 pulse-width modulation (PWM) outputs for the speed controlled activation of high-efficiency pumps. Both pulse-width modulation (PWM) outputs can be switched to 0 - 10 V.

For the connection of high-performance pumps (> 1A) see load relay, page 6.74.

Adapter cable

PWM-/ 0-10 V **1152086**

Adapter cable for signal transmission, for instance from the heating circuit controller "Regtronic RH" to a modulating heat generator with 0-10 V interface.
Accessory required for ErP classification II, VI and VIII.

Outside temperature sensor **1152099**

Temperature sensor PT 1000 for connection to the heating circuit controller "Regtronic RH".

"Regtronic SV" Sensor distributor

for the distribution of one PT 1000 temperature sensor to up to 6 "Regtronic" controllers **1152088**

The sensor distributor "Regtronic SV" distributes the signal of one PT 1000 outside temperature sensor to 6 outputs. This allows the transmission of the signal of one sensor to up to 6 controllers (e.g. heating circuit controller "Regtronic RH").

Example: Distribution of one temperature sensor (outside temperature sensor) to 5 respectively 6 heating circuit controllers "Regtronic RH".

"Regtronic EM" Extension module

for the connection to the heating circuit controller "Regtronic RH"

1152098

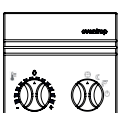

"Regtronic EM" for the extension of the heating circuit controller "Regtronic RH" by 6 sensor inputs and 5 relay outputs. This way, further variable or constant temperature heating circuits can be activated. Up to five extension modules can be connected to the heating circuit controller "Regtronic RH". 1 sensor attached to the pipe PT 1000 is included.

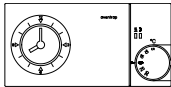

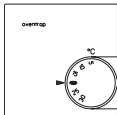

Example: Weather guided control of 2 variable and 2 constant temperature circuits with heat demand (e.g. via a conventional boiler, solid fuel or heat pump) consisting of the heating circuit controller "Regtronic RH" with outdoor sensor and the extension module "Regtronic EM".

Oventrop products:

- 1 "Regtronic RH" Heating circuit controller with outdoor sensor
- 2 "Regtronic EM" Extension module
- 3 Distributor for "Regumat"
- 4 "Regumat S"
- 5 "Regumat M3"
- 6 "Optiflex" Ball valve
- 7 "MSM-Block" Boiler safety device
- 8 "Expa-Con" Valve with lead sealable cap

"Regusol ELH-130-RC" Station DN 25

with safety group and electronic controller consisting of:

- a) high-efficiency pump
- b) ball valve with integrated check valve, thermometer and connection for safety group
- c) ball valve with integrated check valve and thermometer
- d) flow measuring and regulating device with isolation and lateral fill and drain ball valve
- e) safety valve 6 bar
- f) outlet G 3/4 male thread to expansion tank
- g) pressure gauge 10 bar
- h) fill and drain ball valve
- i) wall mounting device
- j) electronic controller
- k) insulation
- l) deaerator

Control range of the flow measuring and regulating device:
2-15 l/min

with Wilo-Yonos PARA ST 25/7 PWM 2 1366597
and controller "Regtronic RC"
with data output (S-bus)

Complete, pre-assembled and leak tested unit for the connection to the solar circuit. With integrated electronic controller for the control and monitoring of a solar thermal plant according to the temperature difference principle. These stations are mainly used for hot potable water preparation. With G 1 male threaded connection for "Regusol" compression fittings to the solar supply and return pipe. For copper and precision steel pipes. Alternatively, compression fittings according to DIN EN 16313 (cone "Euro") of other manufactures may also be used.

With the option to connect an expansion tank to the safety group.
Distance between pipe centres: 100 mm
Pump 130 mm long.
Continuous operating temperature: 120 °C
Short-term max. starting temperature: 160 °C
Suitable for standard solar liquids.

The data output of the "Regtronic RC" can be connected to the data logger "CS-BS".
Inputs: 4 temperature sensors (PT 1000)
Outputs: 3 relays, 1 is a volt free relay

The controller is already cabled with a temperature sensor (PT1000). Another temperature sensor (PT 1000) for the connection to the collector is included. Temperature sensors PT 1000 for the registration of additional temperatures are available as accessories.

Apart from hot potable water preparation, this station with high-efficiency pump offers additional functions. The integrated additional controller allows a support of the heating system, a difference control or a circulation function.

Yield measurement is possible via the **electronic flow sensor**.

Flow sensor without lateral fill and drain ball valve, use filling and flushing device "Regusol": page 9.33.

Interfaces: S-bus for connection to the data logger "CS-BS", SD-card slot for data recording
Inputs: 4 temperature sensors (PT 1000), 1 input for electronic flow sensor (volume flow / temperature)
Outputs: 3 relays, 1 is a volt free relay, 2 pulse-width modulation (PWM) outputs for the speed controlled activation of high-efficiency pumps.

For further information see "Technical information":

"Regusol ELH-130-RC-P" Station DN 25 with high-efficiency pump

with safety group and electronic flow sensor

consisting of:

- a) high-efficiency pump
- b) ball valve with integrated check valve, thermometer and connection for safety group
- c) ball valve with integrated check valve and thermometer
- d) electronic flow sensor (2-40 l/min.)
- e) safety valve 6 bar
- f) outlet G 3/4 male thread to expansion tank
- g) pressure gauge 10 bar
- h) fill and drain ball valve
- i) wall mounting device
- j) electronic controller
- k) insulation
- l) deaerator

---------	-------------	------

"Regusol X-Uno 25" with heat exchanger
 Station with heat exchanger
 1 solar circuit connection
 with electronic controller "Regtronic RX"
 with full graphic display and data output (S-bus)

Capacity: 25 kW
 Number of heat exchanger plates: 30

Connections:
 Primary side: G 1 "Regusol" compression fittings
 Secondary side: G 1 flat sealing

kvs = 2.4 m³/h primary side
 (with a glycol proportion of 40 % in the solar liquid)
 kvs = 3.6 m³/h secondary side

with Wilo Yonos high-efficiency pumps 1361060
 Primary side: ST PWM 15/7
 Secondary side: RS PWM 15/7

Product assembly with electronic controller, with heat exchanger, with three-way conversion valve for second secondary circuit ("Regusol X-Duo 25" only) for a controlled transmission of the heat of the solar circuit (primary circuit) to a buffer storage cylinder (secondary circuit), for instance for existing storage cylinders without direct solar connection.
 The three-way valve integrated in the supply pipe of the secondary circuit ("Regusol X-Duo 25" only) allows the conversion to an additional loading circuit running in parallel, for instance for the loading section by section of the storage cylinder or the thermal loading of another storage cylinder.
 Primary circuit: up to PN 10 and 120 °C
 Starting temperature: 160 °C
 Secondary circuit: up to PN 6 and 120 °C constant operation

"Regusol X-Duo 25" with heat exchanger
 Station with heat exchanger
 1 solar circuit connection/
 2 loading circuit connections
 with electronic controller "Regtronic RX"
 with full graphic display and data output (S-bus)

Capacity: 25 kW
 Number of heat exchanger plates: 30

Connections:
 Primary side: G 1 "Regusol" compression fittings
 Secondary side: G 1 flat sealing

kvs = 2.4 m³/h primary side
 (with a glycol proportion of 40 % in the solar liquid)
 kvs = 3.2 m³/h secondary side

with Wilo Yonos high-efficiency pumps 1361050
 Primary side: ST PWM 15/7
 Secondary side: RS PWM 15/7

The soldered plate heat exchanger complies with the demands of the European Pressure Equipment Directive (PED). Due to turbulent flow conditions, an excellent self-cleaning effect is produced and a contamination is avoided.
 The solar circuit is protected against excess pressure by a safety group integrated in the heat exchanger system. The leak tested components of the heat exchanger system are pre-assembled on a board. The controller is cabled with the internal electric components and has the following connections:
 Output for solar circuit pump
 Output for loading pump
 Output for conversion valve ("Regusol X-Duo 25" only)
 Apart from the outputs mentioned above the "Regtronic RX" has a data bus (S-bus) for the connection to the data logger "CS-BS".
 Temperature inputs for:
 Collector, heat exchanger entry point - primary side, heat exchanger exit point - secondary side, 3 temperature inputs for storage cylinder with loading operation section by section, interfaces for electronic flow sensor.
 Plain text is clearly shown on the display of the controller.
 The heat exchanger system is completely insulated and can be quickly connected to the primary side using compression fittings and to the secondary circuit using flat seals and be put into operation.
 The indicated capacity for the heat transmission applies to a useable solar global radiation of 500 W/m².

The actual heat transmission depends on:

- the reached flow temperature and the volume flow of the primary circuit
- the flow temperature difference between the primary and the secondary circuit
- the required flow temperature and the flow rate of the secondary circuit

For the extension of a "Regusol X" station with high-efficiency pump for the interconnection and regulation of different collector fields (e.g. east/west), see supplementary set "Regusol X": page 9.35

"Regumaq X-30" - without circulation connection

Station for hot potable water preparation with electronic controller "Regtronic RQ" with full graphic display and data output (S-bus)

with Wilo high-efficiency pump Yonos PARA RS 130 15/7 PWM2 for the buffer side
Heat exchanger: 30 plates

Discharge capacity: 2 - 45 l/min. depending on the set potable water temperature and the existing water temperature inside the buffer storage cylinder

Control range of potable water temperature: 20 °C - 60 °C

Connections: G 1 flat sealing for the connection to the buffer and potable water circuit

Potable water circuit: with flow sensor, safety valve 10 bar, electronic resistance thermometer, 2 fill and drain cocks, ball valves and thermometer

Buffer circuit: Fill and drain cocks, ball valves with and without check valve and thermometer, circulation pump

Dimensions (outer dimensions of insulation):
Width: 500 mm
Height: 860 mm
Depth: 260 mm

Model with copper brazed heat exchanger **1381030**
Model with heat exchanger completely made of stainless steel **1381032**

Application:
Electronically controlled product assembly with heat exchanger for the hygienic heating of potable water according to the continuous flow principle.

The potable water is only heated at the moment when it is needed, i. e. "just in time". The stations are especially suitable for detached and semi-detached houses. They are connected to buffer storage cylinders which are heated up by solar energy, solid fuels, gas or oil.

Depending on the temperature and the volume flow on the potable water side, the circulation pump on the heating side is speed regulated. The plate heat exchanger complies with the specifications of the European Pressure Equipment Directive (PED).

Due to the turbulent flow, a good self-cleaning effect avoiding a contamination is achieved. The plate heat exchanger can be flushed using the fill and drain cocks integrated in the primary and secondary circuit.

The potable water circuit is protected by a 10 bar safety valve.

The components of the heat exchanger system have flat sealing connections, are pre-assembled on a mounting board and leak tested.

The controller is wired up with the internal electric components and features a data bus (S-bus) for the connection to the data logger "CS-BS".

"Regumaq XZ-30" - with circulation connection

Station for hot potable water preparation with electronic controller "Regtronic RQ" and connection for potable water circulation systems

with Wilo high-efficiency pump Yonos PARA RS 130 15/7 PWM2 for the buffer side

with Wilo pump ZRS 130 15/4-3KU for the potable water side (circulation)

Model with copper brazed heat exchanger **1381035**
Model with heat exchanger completely made of stainless steel **1381037**

Similar to "Regumaq X-30". The potable water circuit is additionally equipped with a circulation pump for the operation in a circulation system.

With check valve in the circulation circuit. Control functions individually programmable: Adjustable circulation return temperature or adjustable time frames and daily programmes.

"Regumaq XZ-30" - with circulation connection and high-efficiency circulation pump

Station for hot potable water preparation with electronic controller "Regtronic RQ" and connection for potable water circulation systems

with high-efficiency pump Wilo-Yonos PARA RS 130 15/7 PWM 2 for the buffer side

with high-efficiency pump Wilo-Yonos PARA Z RKC 130 15/7 for the potable water side (circulation)

Model with copper brazed heat exchanger **1381025**
Model with heat exchanger completely made of stainless steel **1381027**

Similar to "Regumaq X-30". The potable water circuit is additionally equipped with a high-efficiency circulation pump for the operation in a circulation system.

With check valve in the circulation circuit. Control functions individually programmable: Adjustable circulation return temperature or adjustable time frames and daily programmes.

Possible application of copper brazed plate heat exchangers has to be checked. For further information visit www.oventrop.com/to/trinkwasseranforderung.

12.h Actuators, sensors, valves and fittings

Content

System summary

12.50

“Aktor” Actuators

Different types of control and actuators are used for the building automation:

For a complete isolation of the volume flow, the installation of an actuator with two point control (“on”/“off”) on the flow valve is sufficient. Short and long stroke periods are optional.

When using mixing- or diverting valves, intermediate actuator positions become necessary for the adaptation of two volume flows.

These actuators feature a steady control and any position between fully open and fully closed can be initiated.

Depending on whether a control voltage is supplied by the building automation permanently or only at the point of adjustment, distinction is made between the 0-10 V and three point control.

As before with the two point actuators, a long or short stroke period is optional.

“Aktor T 2P”
Electrothermal actuator (two point)

For room temperature control or as a zone valve.

“Sensor” Sensors

Different types of sensors for the detection of temperature, humidity, pressure and other physical values are used in centralised building control systems. Distinction is made between passive sensors (e.g. PT 1000, N 1000) and active sensors (e.g. 0-10 V output signal). Moreover, the sensors are used for different applications (e.g. potable water).

“Sensor GA FD”
Dew point control with alternating contact

Is required in conjunction with room thermostats to protect chilled surfaces against condensation.
Page 2.72.

“Sensor LW TH/pipe”
Temperature sensor, PT 1000, cold

Sensor attached to the pipe with clip fixing.
Page 6.105.

“Sensor LW TH”
Electric sensor attached to pipe, bimetal

For max. limitation of the flow temperature of surface heating systems.
Page 6.96.

“Sensor LW TH”
Temperature sensor, PT 1000
Solar collector
-50 °C up to +180 °C

For electronic detection of the solar collector temperature.
Page 6.74.

“Sensor LW TH”
Temperature sensor, PT 1000
Heating systems
-10 °C up to +105 °C

For electronic temperature detection in storage cylinders or heating systems.
Page 6.74.

“Sensor LW TQ”
Temperature sensor G 1/4, PT 1000

For electronic temperature detection in potable water risers.
Page 12.37.

“Sensor LW TQ”
Insertion sensor element, PT 1000

For electronic temperature detection in potable water risers. Suitable for all “Aquaström” valves with thermometer connection.

Valves and controls

For heating and cooling system control, the volume flows in the terminal units such as radiators, chilled ceilings, fan coils etc. are balanced by corresponding valves and controls.

At the same time, presetting for hydronic balancing can be carried out at the valves or the volume flow is limited automatically.

The list illustrates a choice of valves and controls for different applications.

The valves and controls can be combined with the preceding actuators.

“AQ/AV9” Thermostatic valves
DN 10 – DN 25

Thermostatic valve for room temperature control at radiators with classic valve connection. Can also be used as zone valve for smaller dimensions
Page 1.42/1.50.

“Multiblock TQ” Two pipe fitting
Straight pattern

Connection fittings “Multiblock T” for the control and isolation of radiators with a lower connection of 50 mm. For two and one pipe heating systems.
Page 1.45.

Valve insert (M 30 x 1.5)
for radiators with integrated distributor

Valve insert for radiators with integrated distributor.
Page 1.102.

“Multidis SH” Stainless steel distributor/collector for radiator connection
flat sealing

Stainless steel distributor/collector “Multidis SH” for radiator connection, surface temperature balance (heating/cooling). Connection of one actuator for each connected circuit.
Page 1.132.

“Cocon QTZ” Pressure independent control valve PN 25

Pressure independent control valve “Cocon QTZ” for central heating and cooling systems with closed circuits. The valve combination consists of an automatic flow regulator and a regulating valve. It is also used for room temperature control with the help of an actuator or can be used as a zone valve. Page 3.52.

“Cocon QFC” Pressure independent control valve PN 16

The pressure independent control valve “Cocon QFC” is installed in heating and cooling systems with closed water circuit (e.g. central heating systems, surface heating systems, fan coil units, chilled ceilings and fan convectors) for an automatic flow control (hydraulic balancing) and for room temperature control via actuators with a modified flow rate. Page 3.56.

“Cocon 2TZ” Regulating valve PN 10 “eco” measuring technique

Regulating valve “Cocon 2TZ” for chilled ceiling installations. The calculated flow rate is set at the regulating valve. It is also used for room temperature control with the help of an actuator or can be used as a zone valve. Page 3.61.

Hydronic balancing of heating and cooling systems is of major importance for an efficient operation. This relates for instance to the regulation of radiators, chilled ceiling elements or pipework valves in heating and cooling systems. The status data is processed or monitored by the centralised building control system.

Oventrop offers valves and controls for different applications which are displayed in the below list.

The valves and controls can be combined with the preceding actuators.

“Tri-M plus TR” Four-way mixing valve with integrated T-piece PN 10

Page 3.78.

“Hycocon ETZ” Regulating valve PN 16 with infinitely variable presetting “eco” measuring technique

High kv value.
Page 3.14.
